Overpriced manh..!!!

Reviewed in India on 23 August 2020

250 nits.. :(Why no 300 nits model are available in Si, team Lenovo !! 250 nits is dull..!!!! Also, I'm waiting for only 512GB/1TB NVMe SSD without any HDD.

Pricing: Even Acer Nitro7 with i5_9thGen, 1TB_SSD, 8GB_RAM & 1660Ti is now priced at 82k. People bought it at as cheaper as 76K(in review).

https://www.amazon.in/dp/B08159BP1K/?

coliid=I22042YH8V27QR&colid=1PLIMRJ05VFAU&psc=1&ref=lv_ov_lig_dp_it

Your initial i7_10thGen model with GTX1650 was released at 81k. Give some room for customers to buy.

What do you want to know about Lenovo Legion 5 10th Gen Intel Core i5 15.6 inch (39.62 cms) Full HD IPS Gaming Laptop

NEW MODEL WHICH WILL BE WORTH BUYING for Legion 5i>>

At 81-85k--

i5 10th Gen, 1650Ti, 8GB RAM, 1TB NVMe SSD, 300nits, 120/144Hz

OR

i510th Gen, 1660Ti, 8GB RAM, 512GB NVMe SSD (or 256GB_SSD + 1TB_HDD), 300nits, 120/144Hz

Laptop build quality & structuring is awesome. Port positioning is phenomenal. It looks & feels premium. It's high-quality plastic, no aluminum.

I feel too much or any RGB lighting is waste. Most imp. is thermals/exhausts, performance & upgradable/manageability. The laptop should be sturdy, classy, clean, and gameful. That's awesomely done by Lenovo. 2 stars for that. But get the pricing right manh...!!!

Best Gaming Laptop ever..

Reviewed in India on 2 September 2020

Verified Purchase

This laptop I bought after intense search I found out this was the best Gaming laptop out there and thankfully it was validated when I got it !! 😊

Pros:

Build Quality: This machine is built like a tank (Body is plastic but extremely high Quality), trust me you will never feel its poorly build. – It is subtle yet very attractive and catches the eye of everyone and has a nice light refracting Legion Logo (I call it Rainbow Logo :P)

Cooling Performance: I think this the only Gaming Machine with 4 Exhaust to throw the heat out!! It also has Thermal sensors which detects the heat and automatically increases or decreases the Fan speed, boy the Hardware and software works like a Charm to keep the system pretty cool (In Gaming Laptops surely the best)

Keyboard: Lenovo calls it Legion TrueStrike keyboard, I must say they have done a phenomenal job on Keyboard it has very nice soft landing mechanism with 100% Anti ghosting keys, the Arrows keys are larger (all Gaming laptops have tiny Arrow keys) + Full size Number pad. They key travel is excellent and very responsive (Only White backlight)

Display: It's a Full HD IPS display with Anti-Glare, I think 120HZ is perfect balance for the GTX 1650 Ti GPU, gaming is much better on this as compared to the 60Hz screen on my previous laptop. Also, the Screen to Bezel ratio is the best in any gaming laptops. Colours are vibrant on the IPS panel. Brightness could be better, but works well indoors. I just love the 120 Hz refresh rate for gaming.

Sound: I was surprised on the sound its loud and clear, great considering most of Gamers use Headphone anyways. Also it comes with Dolby Atmos speaker system and you can customize using Dolby Atmos software.

Performance: Its come with the 10th generation Intel core i5 10300H processor which boosts all the way to 4.5 Ghz and the latest Nvidia 1650 Ti with 4GB GDDR6 GPU. Performance is blazing fast. I will give a future update on FPS against games. But so far gaming experience has been great. This cooling performance on the machine is exceptional. I have not experienced thermal throttling at all. No stutter, slow down, heating issues observed till now.

Software: In Lenovo vantage I love the feature FN+Q, where you can easily choose quiet, balance and performance mode depending what I need on the Go, plus the Hybrid mode is very effective to improve the battery life !!

Ports: The fact all the major ports are on the back, gives a very clutter free experience (All gaming laptops have Ports on the side), its very well thought out placement.

Wifi 6: I have upgraded my router, now I can clearly see the advantage of Wifi 6 while playing games.

Cons:

Battery: I think there is scope to improve the batter life without using hybrid mode

Weight: It is not the thinnest laptop :P, but yea it's a gaming laptop can't complain much

Overall:

It's the best Gaming laptop out there in the market.

Amazon Customer

If ur budget is around 80k go for it.

Reviewed in India on 1 October 2020

Verified Purchase

Hi

I have purchased this model (Legion 5i intel 10th gen / gtx 1650 ti/ 250 nits 120 hz refresh rate/256 gb ssd 1tb hdd)

I have been using this for a week now. Here is my review

BUILD QUALITY:

Build quality is great laptop doesnot look cheap.

I had backlight issue but it got resolved after updating bios from lenovo official website.

The hinge is sturdy.

SCREEN:

I purchased this for gaming and designing softwares.

The screen is not the best out there (according to on paper specs).

45 percent CG(NTSC). If u are a content creator(video editing ,photoshop stuff) don't buy this look for another pc with nice color gamut and less refresh rate. But if u r gaming u wont feel much difference much difference unless u keep a higher color gamut coverage screen side by side(75% NTSC).

250 nits brightness is more than enough if u are indoors(even in a well lit room) which is the the most probable usage for gaming. Unless u want to operate it under sun it is fine. Even if u purchase a 300 nits screen, the screen might be too bright for u to operate on max brightness(This might differ from person to person. Since I have been using ideapad z510 200 nits screen for past 6 years I might have felt that way).

120Hz refresh rate is the main reason I chose this over acer nitro 7 1660 ti. 1660 ti can push more frames than 1650 ti but the screen refresh rate in acer nitro 7 is only 60 Hz. This mean no matter how good ur graphic card is it is insufficient without decent screen with higher refresh rate(This may not be a concern if u play only AAA rated games but if u play games that can run on higher fps the superior graphic card potential is underutilized)

PERFORMANCE:

Performance is great u can run almost all AAA rated games in very high setting (Ultra in few games) with fps above 50 (which is decent without lag)

The framerate difference between gtx 1650ti and gtx 1660ti is around 10 fps. So if we consider the value for money this is the right gpu at this price point (can get 1650 around 56k and 1660ti u need to around 90k ofc acer nitro 7 is an exception).

No thermal throttling. The laptop runs cool(80-90 C) even while playing odyssey in very high settings for about 4 hours non stop ofc this might depend on your room temperature.

BATTERY:

Dont expect much on battery from lenovo gaming laptops getting around 4-5 hours (casual usage). I did not test gaming on battery but according to youtube dont expect more than 1.5- 2 hrs while gaming.

VERDICT:

If u r into video editing or adobe stuff dont purchase this laptop. U can go for acer nitro 7 (intel 9th gen gtx1660 ti 60 Hz refresh rate 1TB SSD)

If u r into gaming as of now(the time when i wrote this review) this is the best u can get around 80 k price point mainly coz of 120Hz screen and 1650ti. The rest of these competitors missing either high refresh rate or graphics.

Another possible candidates to go for in this price range are dell g15 se or asus tuf a15 but according to youtube and customer reviews here in amazon they have thermal throttling and heating issue.

Legion 5i. Amazing product.

Reviewed in India on 12 October 2020

Verified Purchase

Loved the laptop. Got it for 79K and I think it's worth every rupee. If you are looking for a laptop for your academic or professional requirement with a bit of casual gaming, I'd highly recommend this laptop. The only downside is the battery backup, which could have been slightly better. This has an amazing and a smooth display, owing to a 1650i graphic card and a 120hz refresh rate. Overall a great buy, and I'm pleased with it.

Honest Review

Reviewed in India on 22 October 2020

Verified Purchase

UPDATE - I had promised to add an update once I have used the machine for longer. A year into using the laptop, I have moved the rating from 2 to 4 stars. There are comments added individually for each section if you want to read. Hope this helps.

I have traditionally always used Dell, so my comparisons are w.r.t my experiences with Dell. Here's what I can tell you after couple of days of use-

Major Issue - The warranty as mentioned on Amazon is 1 year, but in reality it is only 300 days. How did

Lenovo translate a year or 365 days, into 300 is beyond me.

1. Amazon did deliver me a model which works fine. I had no issues with setup and thus far I haven't seen anything that is a red flag. So in most likelihood, if you're worried about making an online expense, I think you'd be okay more often than not.

2. Last Dell model I was using (Inspiron 7548) was touchscreen with 4K display. The most this laptop offers 1920*1200. Display on Legion falls way short. It's very dull, and the contrast-brightness ratio is unsatisfactory. It does the job, but compared to Dell and their 4K displays, this ofcourse is a tad bit "not of similar quality". Why didn't I buy Dell? Cause these companies are taking us for a ride in India. The same thing which is \$600 in States, is sold at 90K here. Even if you compare 1\$ = 80rs. it still is daylight robbery. Given that limitation I didn't want to splurge.

Update - You get used to it.. lol

3. Sound. This is way better. You might need speakers in a big room, but that's no brainer. In your personal capacity the speakers on this model is more than capable. Its a 2*2 W Harmon Kardon. Equalizer is good. So no shrill trebles, or deep bass as in a cheap club.

Update - In the summer it is not as loud as in the winters.

4. Heating - The one thing I can guarantee you is that Dell will melt your legs away. I don't know about Alienware, but if you've a Dell bout a year old in your possession, you cannot play even the most retro games, cause the heating will always auto-shut the system to prevent it from burning. So far, Legion has outdone Dell. But not by a huge margin, and this is brand new. Also, I haven't had a chance to run heavy games on it, and then see how it works. It has decent vents, but if you're sitting in a desert, you'll only have warm air to feed into the machine. Sadly, India has been turned into a desert, thanks to our glorious ignorance towards nature, so there is no machine built to perform on heating scales in a furnace. Good luck finding one.

Update - This is the sole reason, I moved the ratings from 2 to 4. The heat dissipation in the laptop compared to what I was using is WAY better. Now, I don't play really taxing games on this system, but they are decent enough to push the system a little. The laptop has not dissatisfied in anyway so far.

5. Gaming - For a budget gaming laptop, you can definitely consider this.

6. Keyboard/Touchpad - excellent. Probably the best feature. It's a bit compact, so might take about an hour to get used to keys that are this close to each other, but after that it's like having your fingers in melted butter.

Overall - Is this the best machine you can buy? Probably no, but given the price it isn't the worse you can manage. Esp in the sale it is even lower, price wise. It might be a better purchase than Acer, MSI and HP. ASUS's TUF F15 and A15 are decent, but again not a huge performance gap, and Lenovo laptops last.

Genuine review....from a gamer

Reviewed in India on 30 January 2021

Verified Purchase

Kindly note that people are reviewing without purchasing and please don't refer it.

I bought this for 80k and trust me it's worth.....I was using a pavilion gaming series and it's performance was really poor with 1050ti.....this on the other hand with the i5 10th gen and 1650ti is a good choice and can run AAA titles smoothly.....I'm a valorant addict and I easily get 240fps(game shows).... brightness is a bit on the lower side and for home use itself you must use 75%..... Battery is easy 5 hrs on web activities and 1.5 on gaming.....

The best part is built and thermals.....the built is like a tank and the laptop literally never heats up(don't cover it's vent to prove me wrong).....I have been using it for the past 1 month and I'm fully satisfied

Eniyan

Best non "Gamery" looking Gaming laptop 😊

Reviewed in India on 6 November 2020

Verified Purchase

First of all I feel lucky for getting this laptop for 72,240 in Diwali sale.

1) Looks:

This is by far a best professional looking Gaming laptop. Nothing flashy, just does the job which it's intend. Looks nice.

2) Display:

People talking about low brightness, color gamut, etc. But the thing is you only get what you pay for. For me, display is decent enough since am coming from Asus N550JK which had 4th gen i7 and 850m graphics.

3) Performance:

Since it's first few days of usage and only downloaded world of warship and played it, in that game graphics is fine and display feels buttery smooth. Downloading Call of duty: Warzone and everything seems effortless even with 8 GB Ram. Actually i5 10300H is a good processor and there won't be any thermal throttling I

suppose.Now about Graphics card.Yes,it would be nicer if it had 1660ti,but for casual gaming 1650ti will be enough.

4) Battery:

If you play games without connecting power cable,then it wont impress you much.But,for me,you won't able to play games in any laptop without charging it.So have to content with some what low battery backup for the sake of performance.

5)Keyboard and touch pad:

Keyboard feels smooth,good travel and soft travel touch pad does a decent job.

Verdict: If are having a budget around 72 to 75 k then this is The laptop.If you want a well performing machine,then pay almost double(130k) and get 5Pi.

Ashish

A complete quality product

Reviewed in India on 27 October 2020

Verified Purchase

Pros-

Unlike ROGs and MSIs of the world it's build so good, at this price point it's the best. Built out of plastic yet feels like tank.

Heating and thermal management is on point. cools like nothing else.

It is bit thick, but for a good cause, which again is surprisingly isn't that heavy!

Key board is good, it has white backlit keyboard so that's something to keep in mind but for gaming I always prefer external keyboard so for normal browsing and coding like things it gets the job done.

Ports are more than sufficient, and more importantly almost all of them are located at the back, so that you setup looks clean which is sweet.

Doesn't have that much of bloatware like one or two Lenovo apps.

Laptop overall looks professional doesn't screams like a gaming laptop. Which might be an user preference thing, but for me this design looks the best. Keyboard and trackpad are nice goes well with the overall design of the laptop.

And supports fast charging too, so my laptop gets full within an hour, even less than one hour.

Cons-

The screen isn't that bright, although it's mate and has good resolution but as it's 250nits only you can't help, so for content creator that might be a huge setback.

Battery isn't shockingly good, but I feel it will deteriorate over the time.

Verdict-

yes at normal days it might be priced bit higher I mean probably a lot higher, I got it for around 71K which most of you might say is still a lot for the product, but I think the product Lenovo has delivered this time, it worths it!

santosh toppo

Good at this price.

Reviewed in India on 28 October 2020

Verified Purchase

Specifications are good at this 71990rs price

pros:

look is premium,speed is good.

cons:

1.Does not have that legion Y logo light.

2.Screen lighting is little dim ,for a better view u have to raise the brightness upto 70%.

3.Camera is not at all a good one(0.9MP).

4.Sound quality is little low.

5.Keyboard width is also small as compared to other laptops .

6.No indication light for the different ports.

7.after booting first time u won't be able to turn on the keyboard light ,for this u have to restart the system again.
