Wireless, no input lag, super cute [Updated see below]

Reviewed in India on 8 October 2018

Gone are the days when you need wired mice to avoid input lag and improve reaction times. We now have affordable but performance mice WITHOUT wires! Great feat by Logitech. The G304/G305 mouse is small, lightweight and perfect for claw and claw/palm hybrid grips. My hand is 18 cm and it is perfect for me.

Wireless, no input lag, super cute [Updated see below]

Reviewed in India on 8 October 2018

Verified Purchase

Gone are the days when you need wired mice to avoid input lag and improve reaction times. We now have affordable but performance mice WITHOUT wires! Great feat by Logitech.

The G304/G305 mouse is small, lightweight and perfect for claw and claw/palm hybrid grips. My hand is 18 cm and it is perfect for me.

My only complaint is the buttons. Especially thumb buttons could have been bigger with more tactile feedback. But they are least used generally so not reducing any stars for that.

I have set polling rate to 500Hz and 1000 DPI in Logitech. In CS GO, in-game sens 1.0 - it has definitely improved my experience. It is a must buy for people who look for affordable wireless gaming mice that perform well in FPS.

Update 11 March 2020. The left mouse button now double clicks every few clicks. I guess this mouse cannot be trusted after one year, and considering the price, I can now say don't buy it. I am not recommending it.

**Simply, the best value for money wireless mouse**

Reviewed in India on 8 October 2019

**Verified Purchase**

First of all, the G304 and G305 are the same mouse. They are just branded differently in the Asian market for some reason.

Don't use the included AA battery, instead get a rechargeable AAA battery and use aluminium foil ball to fit it. That hack brings down the overall weight of the mouse from 97 to 87 gm.

Great shape and feel and size. All the buttons are very responsive. No lag at all.

**Best Wireless Mouse: G703 alternative for cheap**

Reviewed in India on 14 September 2018

**Verified Purchase**

I believe this is the Asian variant of G305. The best wireless mouse i have used, it feel better in hands than G403 (at least for me). Also its fast and responsive as my G403 wireless. Its having different sensor than G102/G203 which use Hero 6k, i guess its just the DPI can't confirm, but i can confirm that its much more responsive than G102 from my experience. Highly recommend for Hardcore FPS gaming!

Pros:

Weight: 98G with battery

Sensor: Hero 12K which is close to pixart PWM 3366 (200 to 12000 DPI) with 400 in/sec.

Consumes less power compared to 3366

Accuracy: Super aceturate

Design: pretty much similar to G102/G203 and Gpro (Wired)

Battery life: The best in market last for very long time.

Comes with Lightspeed dongle. :D

Dimension: 116x62x38, which is compact and good for small to medium hand users.

Cons:

Weight: The Distribution is not that great if you lift the mouse often.

USB: No usb connection to use as wired connection (prevention from exploding battery?)

Build: Plastic but cant complaint for the price.

Update: I can see some comments saying their mouse is not working so that the model if flawed. I am using it for 2 years, SO FAR ALL GOOD. I had the click issue with my G403 which is a top mouse. The quality depends on how you use and some factor of your PC, like over voltage, dust collection and static build up. All logitech mouse use omron switches on gaming line up as far as i know.

**Known bad switch problems**

Reviewed in India on 4 December 2019

**Verified Purchase**

This mouse has the fairly common problem of the poor life span amron switches and left or right-click will give you issues within a year so you can warranty return it but that's a unnecessary pain that takes months. my left click stopped holding after 11 months and failed not long after. Its a shame as it really is a good mouse in all other regards.

**Below 800dpi user.. Just go for it.. Best in this price range.**

Reviewed in India on 14 December 2019

**Verified Purchase**

Earlier I was using G502 Hero. Hero is the best mouse I have ever used but why I took this... Becoz Hero weight was little heavy... I was earlier using 1600dpi then came to 1000dpi then down to 800dpi till 800dpi the mouse was awesome but lowering this level was difficult the mouse was heavy and 400dpi like my hand was paining... So Hero is 800dpi and for uper then that is perfect.. So one day I was seaching and found G304 mouse I have heard many things about this mouse.. So I planned to take this mouse. Firstly I was facing problems like... This mouse is not comfortable like g502hero this is not ergonomic mouse.. And the built qulity is really very cheap type. This was the two things I faced.. Now the pros... Seriously this mouse is damn good... Seriously You will never feel that You are playing with wireless mouse.. This mouse works better the wire mouse.. After using this mouse my reflex and my response time is became really good... If you are 400dpi user... I will definitely recommend you.. Any below 800dpi user buy this blindly This mouse is amazing... But If you are higher dpi user then I will recommend you to go with G502 hero.

Pro:- This best mouse is the price range.

Wireless and Just go for it.

Con:- Not ergonomic.

Cheap plastic feels. But if you use it... You will become useto it... Thank You...

I am really happy after using this mouse...

#### Less than a year : flawless until left click went rogue

Reviewed in India on 8 December 2020

Verified Purchase

One major flaw which trumps all the good that this mouse had to offer; faulty left click in less than a year. The Logitech website is a nightmare to navigate and difficult actually get a response from a person to help you out. My warranty is about to void and just one response later, the Logitech agent has disappeared. It's worse for Indian users as certain links do not work as intended.

Everything else about this mouse is good.

Great tracking, essentially perfect sensor, lightweight. You can remove the battery lid and play for an even lighter experience.

Perhaps you can risk it and go for it as reliable options for wireless mice are sparse, but keep all your documentation handy and register the mouse on the website asap.

One option I'm considering is ordering an omron Japan switch (this has a Chinese one) and solder it myself. This isn't something you should have to do for less than a year of owning a gaming mouse meant for rough use from a reputable company like Logitech.

#### The Scroll wheel jump issue is very much present in this model

Reviewed in India on 30 November 2018

Verified Purchase

The Scroll wheel jump issue where sometimes the the page goes up when you scroll down, is well known among various Logitech mice. I faced the issue in my previous G603 mouse so I got this mouse. But barely after a month I am seeing the issue on this mouse also. If your workflow involves scrolling (like browsing, programming), then the jumpiness of the scroll wheel is going to be a deal breaker. AFAIK, there is no firmware update out for this issue for this mouse.

#### Good wireless gaming mouse with a fatal flaw. (Double clicking issue) :: DONT BUY

Reviewed in India on 21 September 2020

Verified Purchase

Really loved the wireless mouse after upgrading from a wired mouse. But after 8 months of use, I started getting double clicks from my left mouse button. Initially tried to rectify with windows settings and removing static discharge method. Then I realized its an issue with this mouse model. Basically a design flaw which reduces the life the product to around 8-10 months. I am done with Logitech products. Previously it was their G 413 Keyboard with Keys issue and now mouse. Can avail warranty but in busy schedule and Covid times decided order a Razer wireless mouse instead.

**Top-notch gaming mouse (read update)**

Reviewed in India on 27 January 2020

**Verified Purchase**

April 2021 update:

I've been using this mouse for a while now, using AAA batteries, which makes it extremely light. One issue I'd faced was unintentional double clicking from the left mouse button. This issue comes and goes, and my research shows that it's a very common issue with this model, and Logitech has not acknowledged it or provided a proper fix. As a result, its difficult for me to recommend this mouse.

Original review follows:

This model is more commonly known as the G305 in Western markets, and seems to be identical to it. It's got the same top-notch Hero sensor as Logitech's most expensive mice, which tests show is just as good as any wired gaming mouse. I bought this mouse to replace a Redragon Shark, which I felt was tracking poorly. Granted, it cost about half of what this did, but it seems like that was a case of "you get what you pay for".

The biggest concern I had purchasing the mouse was its size, but it turns out that I needn't have worried. I have relatively large hands, but since I use a claw grip, this works perfectly fine, and is quite comfortable. It's noticeably lighter than the Redragon Shark, since this uses 1 AA instead of 2. I believe it can get even lighter if used with a AAA battery (with some kind of adapter).

Tracking feels extremely smooth, with its 1000Hz polling rate. Logitech's G-Hub software is well-designed and offers a lot of customizability.

Overall, this feels like an excellent choice for gamers - as long as you're using a claw grip, or have small-to-medium sized hands (palm grip).

**Gaming at it's Lightest**

Reviewed in India on 27 September 2018

**Verified Purchase**

Purchase Experience

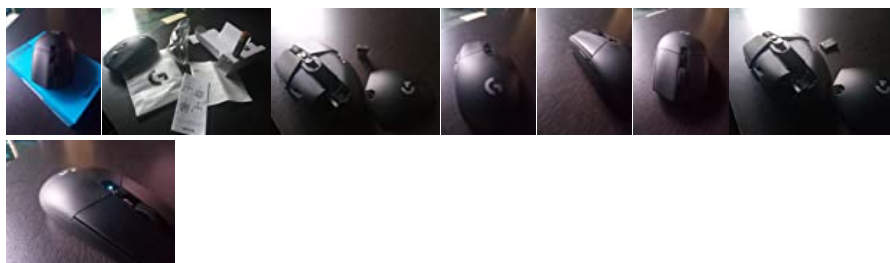

First off received the product on time great seller experience and amazon services

Product

A Simple design but great on performance, Light in weight as in it's maneuverability, clicky and responsive buttons and great wireless capability, a perfect fit for medium sized palm rests, Overall great wireless gaming mouse at a great price.

A bit Trivia it's called Logitech G304 Lightspeed Wireless Gaming Mouse in India and elsewhere Logitech G305 Lightspeed Wireless Gaming Mouse ;)

\*\* Make sure u register your product at logitech's website for warranty purposes.
