Does what it says...
Reviewed in India on 20 May 2020

I'm a full time Developer and I needed a bigger screen because staring at small texts all day long on a 15inch screen is not good enough and it strains my eyes.
Earlier i was considering 24inch of the same model but the price difference was of 4k INR and i did not find it worth but still i had doubts in my mind that whether i made a mistake or what. But

Pixelated text and fonts, below average experience
Reviewed in India on 1 July 2020

Pixelated text and fonts cause headache while working or browsing. The system settings and menu is also pixelated, so it's not the issue with specific operating system. I tried connecting with windows, linux and Mac but pixelated overall appearance in all. HD videos appear good, without issues but I mostly work with text while coding and browsing, so it's waste of money for

I'm a full time Developer and I needed a bigger screen because staring at small texts all day long on a 15inch screen is not good enough and it strains my eyes.
Earlier i was considering 24inch of the same model but the price difference was of 4k INR and i did not find it worth but still i had doubts in my mind that whether i made a mistake or what. But once i got this product and i set it up, I'm telling you guyz, it is just awesome and for programmers I don't think that 4k is worth. That 2 inch difference is not something that you could notice. Infact, after using this 22 inch monitor, i think 1080 is the best resolution, and going 24 or 27 is overkill and you could see the pixels in the screen. So, if you are buying a FHD monitor, 22 inch is the best size you should go for, 24 and 27 inch is best for 1440 resolution. Not only for programmers, if you a media consumer then this is a great choice at this price. You should go for this product.

Pixelated text and fonts cause headache while working or browsing. The system settings and menu is also pixelated, so it's not the issue with specific operating system. I tried connecting with windows, linux and Mac but pixelated overall appearance in all. HD videos appear good, without issues but I mostly work with text while coding and browsing, so it's waste of money for me. I trusted LG after reading lot of good reviews but no-one pointed this pixelation and blurry text/fonts issue. I hope my review helps others to make informed choice

Made in China

Reviewed in India on 19 June 2020

Colour: Black　　Style name: 22" FHS IPS without Speaker　　Pattern name: Monitor　　**Verified Purchase**

I was misguided to buy it saying it's made in india. Once I received it I got to know its actual china made. Had it keep it as it was not returnable. Amazon please mention where the product is made.

Facing Wierd Issue with the Screen at 75hz

Reviewed in India on 30 May 2020

Colour: Black　　Style name: 22" FHS IPS without Speaker　　Pattern name: Monitor　　**Verified Purchase**

I just bought this monitor, and I know that this can run at 75hz of refresh rate, so I changed the refresh rate to the 75hz, and then I saw these wired green lines and screen trearing thing this only happened when I am running the monitor in 75hz settings, and when I dropped the refresh rate to again 60hz it becomes normal, and there will be no issues then, I am using it with my i3, 8th gen Lenovo Laptop with no dedicated GPU. I don't know why this is happening, maybe my monitor has some issues, if anyone is facing the same issue, please reply or otherwise I have to replace this one.

Good Monitor with Some Issues

Reviewed in India on 14 February 2021

Colour: White　　Style name: 24" FHD IPS Speaker　　Pattern name: Monitor　　**Verified Purchase**

The overall picture quality is quite good. Look and feel of the monitor is also good. It has a good level of brightness and contrast range. I use it for my job and spend more than 10 hours per day using it. But I don't feel any strain on my eyes. The height of the stand is perfect for me.
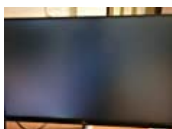

However, there are two issues:
1. There is some light bleeding (see photo)
2. Speaker quality is very bad
Although I didn't expect the speakers to be of great quality, it still disappointed me for how bad they sound.

But it has an audio port, so it should be ok. I haven't tried the audio port sound though.

If you are ok with these two issues, you can go ahead with this one.

Excellent display at this price

Reviewed in India on 17 May 2020

Colour: Black   Style name: 22" FHS IPS without Speaker   Pattern name: Monitor   **Verified Purchase**

As LG is the main player in the field of displays and this time too I was not disappointed. It is a good monitor for both developers and gamers. We have an option for fine-tuning the settings for the monitor and there is also an out for speakers.

Nice IPS Monitor

Reviewed in India on 9 June 2020

Colour: Black   Style name: 22" FHS IPS without Speaker   Pattern name: Monitor   **Verified Purchase**

Its a good monitor which uses IPS panel, so colors are accurate and viewing angle is good. Refresh rate is 75hz, but its 60hz out of the box, you would need to set it up to work at 75hz. I mainly use it as a second screen with my laptop for web development, but have tested games like Call of duty Warzone and CSGO. Sadly, none of them reach 60hz on my laptop. Upgrade from 60hz to 75hz does not feel significant otherwise in day to day computing. If gaming is the only purpose and you have GPU that can push games to 100 FPS or more, then 75hz display will be a bottleneck. Look for 144hz.
